PROJECTS

Analysis of Various Heart Diseases

Python, Machine Learning, Arduino

This project uses Deep Neural Network to analyze Heart Diseases. Live ECG pulse of a person is fetched using Arduino and AD8232 module and fed into the Python model which transforms it into a 2-dimensional grayscale image and classifies it as Normal or Abnormal beat. It is able to classify with an accuracy of **94.05%**.

Website Reconnaissance Tool

Python, Flask

The tool performs Information Gathering on given Target website. It performs Port scanning, Banner grabbing, Whois Lookup, Reverse IP Lookup, Traceroute Info and also retrieves contact information using Regular Expressions. The tool utilises Python's Socket and Requests Libraries.

COLLEGE RESPONSIBILITIES

SIG Head, IEEE MSIT Cyber Security — 2019

As the Special Interest Group Head, I'm responsible for taking workshop once a week, where I teach various Cyber Security and Networking Concepts. I also mentor my juniors.

Placement Coordinator — 2018-Present

I, along with a team of 7 students, was responsible for handling the placements process at my College. We were responsible for making all the arrangements. We handled the data of all the students of our batch. We were also responsible for filtering the students as per the company's eligibility criteria. I learnt Time and Resource Management, Email writing and MS Excel.
